

Motorsport Team Manager Software

Product information

Introduction:

The Motorport Team Manager software is specially developed for motorsport teams which take part in motorrace-, motocross-, speedway events and all other kind of motorsport events. Also demanding individual drivers, which like to track and trace all their motorcycle settings can use this software. In addition to this organizers of circuit event days (for private persons) can use this to facilitate their participants during their event.

The motorsport become more and more a high-tech sport. Nowadays, this even applies to semiprofessional- and amateur teams. The tracking and tracing of motorcycle settings during an event and the evaluation of this has become a major task for the team members or the driver. Especially if the team consists of more than one driver.

The Motorsport Team Manager Software allows you to track and trace all event data and all technical related motorcycle settings per driver including his results. It can keep track of all settings and related results of a complete motorsport team, including the evaluation of the results.

The Motorsport Team Manager Software is supplied on CD with a software licence. All documentation is on the CD and also direct available via the Help function. The installation is very easy as you are guided via an installation menu.

The Motorsport Team Manager Software:

The Team Manager Software contains many functions. Per event data of a complete team of maximum 5 drivers can be tracked in detail, this depends on the type of software licence you have bought. Of course data can be evaluated afterwards.

The following data can be tracked :

- All event data
- Team composition
- Session names, session types and session remarks
- Brand names, Type
- Driver License no. (registration), start position
- Weather conditions: temperature, humidity and wind conditions per session
- All session results with recording of five best results per session per drivers
- All tyre specifications and settings (front / rear)
- All suspension settings and specifications (front / rear)
- Gearbox ratio's

- Secondary ratio
- Chain type
- All brake specifications
- All frame settings
- All steering settings
- Air filter specifications
- Air inlet specifications and settings
- Exhaust specification and settings
- Fuel information
- Carburetion settings
- Sparkplug data
- Squeeze data
- Settings of power electronics
- Result data (Time or other)
- Etc. etc.

retrieve settings from previous events and compare those with other results.

This software is suitable for 4-stroke as well as 2-stroke machines. The menu structure is very easy to learn: by means of one mouse click you can select another tab page and you jump to another drivers information.

As there are various types of event and motorsport activities you can customize all pull down menus. This makes the Team Manager Software very powerful as you can adapt it completely to your own needs. Excellent reporting options give you the possibility to print custom reports. Also information of all drivers can be combined completely free of choice.

The software runs on any laptop or desktop PC with Windows XP Home edition or Windows XP Professional edition. The software license depends on the number of drives you want to support in your team. In this way you pay only the license for the exact size of your team.

All settings can be recorded and tracked per driver per session. (in total approx. 50 parameters). This means that very detailed tracking per drivers is possible. In this way results and settings can be easily compared or recalled from previous events.

The Team Manager Software avoids large manual administrations on paper, which get lost or are inconsistent. Just use your laptop or desktop PC for this! It avoids racing disappointments as now everything is recorded on your PC it is very easy to
